

M4 - 440EPx implementation

This course covers AMCC 440EP and 440EPx processors

Objectives

- The course explains how to design a 440EPx board.
- DDR SDRAM operation is described in order to understand both the electrical interface and the memory controller programming.
- Book E PowerPC architecture is studied through the 440EPx, especially the MMU.
- The training focuses on the new floating point unit.
- The course provides examples of internal peripherals software drivers.
- Gigabit Ethernet controller is viewed in detail.
- The training describes on data flows between PCI bus and internal PLB bus.
- A chapter on Linux porting can be appended on request.

Labs are compiled with Diab Data compiler and run under Lauterbach debugger.

A more detailed course description is available on request at training@ac6-training.com

Prerequisites

- Experience of a 32 bit processor or DSP is mandatory.
- Knowledge of PCI bus is recommended (see our course reference cours [IC1 - PCI 3.0](#)).
- Knowledge of USB is recommended (see our course reference cours [IP2 - USB 2.0](#)).

Environnement du cours

- Cours théorique
 - Support de cours au format PDF (en anglais) et une version imprimée lors des sessions en présentiel
 - Cours dispensé via le système de visioconférence Teams (si à distance)
 - Le formateur répond aux questions des stagiaires en direct pendant la formation et fournit une assistance technique et pédagogique
- Au début de chaque demi-journée une période est réservée à une interaction avec les stagiaires pour s'assurer que le cours répond à leurs attentes et l'adapter si nécessaire

Audience visée

- Tout ingénieur ou technicien en systèmes embarqués possédant les prérequis ci-dessus.

Modalités d'évaluation

- Les prérequis indiqués ci-dessus sont évalués avant la formation par l'encadrement technique du stagiaire dans son entreprise, ou par le stagiaire lui-même dans le cas exceptionnel d'un stagiaire individuel.
- Les progrès des stagiaires sont évalués par des quizz proposés en fin des sections pour vérifier que les stagiaires ont assimilé les points présentés
- En fin de formation, une attestation et un certificat attestant que le stagiaire a suivi le cours avec succès.
 - En cas de problème dû à un manque de prérequis de la part du stagiaire, constaté lors de la formation, une formation différente ou complémentaire lui est proposée, en général pour conforter ses prérequis, en accord avec son responsable en entreprise le cas échéant.

Plan

INTRODUCTION TO 440EPx

- Internal bus organization : dual PLB, OPB, DCR
- Internal concurrent transfers examples
- Hardware implementation : pinout, GPIOs configuration
- 440EPx mapping
- Programming model

CoreConnect PARAMETERIZING

- PLB4-to-PLB3 and PLB3-to-PLB4 bridge parameters
- PLB arbiter, OPB arbiter and PLB4-to-OPB bridge configuration
- Bus errors recovery from syndrome registers
- PLB performance monitor

THE 440 CORE

- Pipeline
- Internal caches
- Speculative loads, storage ordering and synchronization : msync & mbar instructions
- MMU

BOOK E COMPLIANT CORE

- Programming model
- Branch instructions
- Addressing modes, load & store instructions
- Integer instructions
- 16-bit mac instructions to develop DSP algorithms
- Exception management
- Interrupt processing registers
- Core timers
- PowerPC EABI
- JTAG debug
- Real time trace

THE FLOATING POINT UNIT

- IEEE754 basics
- The 440EP FPU features, compatibility with the IEEE754 standard
- Support for single and double precision
- Performance of multiply-accumulate instructions

CLOCKS, RESET AND POWER MANAGEMENT

- Clocks synthesizer
- PCI clocking
- Low power modes
- Reset signals
- Initialization software requirements
- IIC bootstrap controller

INTERRUPT CONTROLLER & GENERAL PURPOSE TIMERS

- Interrupt source enumeration
- Interrupt masking and acknowledgement explanation

- Critical interrupt handlers using vectorization
- General Purpose Timers

THE DDR-SDRAM CONTROLLER

- DDR-SDRAM operation : a 128-Mbits DDR-SDRAM from Micron is used as an example
- Command truth table
- Hardware interface, SSTL-2 termination logic
- Bank activation, read, write and precharge chronograms
- ECC error correction
- Introduction to 440EP DDR-SDRAM controller
- Address decode
- Timing parameters programming
- Initialization routine

THE EXTERNAL BUS CONTROLLER

- The bridge between external bus and PLB, read and write buffers
- Dynamic bus sizing
- Address decoding in bank registers to control the chip-select signals
- Timing parameters initialization
- Device-paced transfers
- External bus master interface
- The NAND Flash controller
- Direct interfacing to discrete NAND flash devices (up to 4 devices), SmartMedia card socket

THE PCI BRIDGE

- Explaining the data path within the bridge for read and write transactions
- Configuration cycles
- Setting translations between local memory space and PCI MEM space (outbound transactions), and between PCI MEM space and local memory space (inbound transactions)
- Error handling
- Arbitration algorithm

THE 4 DMA CHANNELS

- Overview of the DMA to PLB4 and DMA to PLB3 controllers
- The buffered transfer mode
- Related signals
- Channels bus priority
- Data packing / unpacking
- Buffers chaining

THE GIGABIT ETHERNET CONTROLLER

- 802.3 specification fundamentals
- 440EPx Ethernet controller organization : EMAC and MAL modules, reasons of their independence
- Possible PHY interfaces
- The addressing modes : unicast, multicast, broadcast and promiscuous
- Hash table interest for switch applications
- Buffer descriptors mechanism, wrapping
- Transmit sequence
- Receive sequence
- Buffer descriptors initialization
- Interrupt management

THE SECURITY MODULE

- Introduction to encryption
- On-chip Ipsec / SSL Security acceleration engine

- Public key acceleration

THE USB INTERFACES

- USB protocol fundamentals
- Internal vs external transceiver
- USB2.0 device interface
- USB1.1 host interface
- Dedicated DMA
- UTMI bus

THE UARTS

- UART description
- The UART frame : break, idle, start, stop
- Transmission and reception FIFOs use
- Flow control signals management

THE SPI PORT

- SPI protocol fundamentals
- Clock polarity and phase selection
- Transmit and receive sequences

THE IIC PORTS

- IIC protocol fundamentals
- Transfer chronograms, IIC_SCL and IIC_SDA pins
- Transmission and reception sequence
