

RA7 - CORTEX-A53 implementation, ARM Architecture V8

This course covers the Cortex-A53 and AARCH64

OBJECTIVES

- This course aims to highlight the new features offered by the V8 architecture.
- It has been developed for engineers developing low level software.
- First, an overview of Cortex-A53 is provided, to highlight the differences between a Cortex-A15/Cortex-A7 hardware platform based on CCI-400 and a Cortex-A57/Cortex-A53 hardware platform based on CCN-504.
- The new exception mechanism is described.
- The enhancements regarding the LPAE are detailed.
- New A64 assembler instructions are explained through practical examples.
- The AAPCS64 is also covered.
- The course also details the new debug ARM V8 features.
- Cortex-A53 hardware implementation is explained, particularly the low power states.

A more detailed course description is available on request at training@ac6-training.com

PREREQUISITES AND RELATED COURSES

- Knowledge of ARM Architecture V7 is mandatory, particularly the LPAE.

OVERVIEW OF CORTEX-A53

- Memory interface that implements either an ACE or CHI interface
- Coherent interface, studying examples of hardware coherency within a Cluster and between Clusters
- SoC architecture based on CCN-504 interconnect

Plan

INTRODUCTION TO ARM ARCHITECTURE V8

- Enhancement with regard to AArchv7
- Register mapping between A32/T32 and A64
- Mapping of AArch64 System registers to the AArch32 System registers

ARMv8 EXCEPTION

- Four exception levels
- Exception Link Registers
- Register banking by exception level based on a new exception model
- Nesting on the same exception level

- Exception type and exception origin
- Syndrome registers used to provide a status information to the exception handler
- Exception return instruction

THE ARMV8-A SECURITY MODEL

- Security model when EL3 is using AArch64
- Trapping to EL3 using AArch64

INTERPROCESSING

- Managing two types of processes: 64-bit and 32-bit, switching on an exception
- Non secure space organization

VIRTUALIZATION

- The effect of implementing EL2 on the Exception model
- Virtual interrupts

INSTRUCTION PIPELINE

- Superscalar operation
- Predicted and non-predicted instructions
- Branch accelerators
- Invalidation and context switches

MULTICORE

- Synchronization and semaphores
- Shareability memory attributes
- Operation of the global monitor
- Load acquire / Store release instruction pair
- Use of WFE and SEV instructions by spin-locks

MEMORY ACCESSES

- Mixed-endian support
- Program counter and stack pointer alignment
- Ordering requirements
- Page attributes : Normal or Device
- Shareability and access limitations on the data barrier operations
- Memory barriers

ARMv8 MMU SUPPORT

- LPAE enhancements to adapt to AArch64
- Supporting up to 48 bits of VA per TTBR
- Access permission checking
- Supporting up to 48 bits of IPA and PA spaces
- VMSAv8-64 address translation system
- Memory translation granule size
- Descriptor page table organization, descriptor format
- Hierarchical control of Secure or Non-secure memory accesses
- TLB preload instructions
- TLB maintenance instructions in A64
- Cortex-A53 TLB implementation

CACHES

- Cache hierarchy, Point of Unification, Point of Coherency
- Load non temporal instruction
- Instruction and Data cache maintenance instructions in A64
- Cortex-A53 L1 and L2 memory system

A64 NEW INSTRUCTION SET

- A64 assembly language, regular bit encoding structure
- Instruction aliases
- Branches, function call and return
- Conditional select instructions, avoiding branches
- Load Store instructions, addressing modes
- Arithmetic and logical instructions, CRC calculation instructions
- Instructions for accessing AArch32 Execution environment registers

ARM ARCHITECTURE PROCEDURE CALL STANDARD 64-bit

- General register usage convention
- Stack pointer and frame pointer
- NEON / VFP register usage convention

NEON, VFP AND CRYPTOGRAPHIC UNITS

- New register banking for NEON and VFP
- Mapping of the SIMD and floating-point registers between the Execution states
- Vector formats in AArch64 state
- New SIMD instructions
- Cryptography software support through a new family of instructions

GICv3

- Generic Interrupt Controller CPU interface registers
- Interrupt virtualization
- Interrupt handling to support nesting

GENERIC TIMER

- System counter clock frequency
- Physical and virtual timer count registers
- Physical up-count comparison, down-count value and timer control registers
- Virtual up-count comparison, down-count value and timer control registers

LOW POWER STATES

- Wait for Interrupt and Wait for Event
- Cortex-A53 low power modes
- L2 Wait for Interrupt
- Processor dynamic retention
- Support for power management with multiple power domains
- Dormant mode

ARMV8 DEBUG

- Self-hosted debug

- Debug state instructions
- Linked comparisons for Breakpoint/Watchpoint exception generation
- Software Step exceptions
- Routing debug exceptions
- External debug, cross-triggering
- Embedded Trace Macrocell architecture

PERFORMANCE MONITOR

- Per-function performance monitoring at EL0 level
- Effect of EL3 and EL2 on Performance Monitor
- Event filtering

CORTEX-A53 HARDWARE IMPLEMENTATION

- Clocking
- Resets
